

A Helping Professional hand

Future Techno Labs is a company that provides project training to the final year students of BCA, MCA and BE final year.

I remember the days when we were assigned our final year project. Although I was a bright student I still had to struggle till the last moment of submission. The only reason behind the ruckus was that I was not able to understand that implementation of theoretical knowledge is different and difficult from practical knowledge and started late. This happens with all the final year students almost every year. The only way out of this scenario is to finish the project under profession guidance.

What happened to me is the past and I did not want my younger sister to go through the same trouble, so I opted for professional guidance from a professional company.

Future Techno Labs is a company that provides project training to the final year students of BCA, MCA and BE final year. Their prime objective is to provide the right guidance and opportunity to students during their final year to work on real time projects. At this stage, it is very important that students get practical training exposure, which will provide them with the idea of how professionals work and how to fulfill the client's demand

In order to keep the final year [B.E, MCA, and BCA] students at par with the ongoing market trends, Future Techno Labs has designed training for the candidates to complete their MCA final year project, **[BE Final Semester Project](#)**. As IT industry demands professionals who are ready-to-work and deliver from the day they start, Future Techno Labs works with the student to make them experience the professional environment of the industry.

Their MCA Final Year Project training program helped many students to secure good placements in various companies. They are an IT Training company who not only provide training but also provide 100% assistance in getting you a job in top companies all over the world.

Live & Academic Project Training:

- BCA Last Year Project
- MCA Last Year Project
- BE Final year semester Project
- BE Information Technology Final Semester
- BE Computer Engineering Final Semester

Our Project Training programs are designed in such a manner that the students get a chance to work with industry professionals throughout their training and the same relationship continues until the end of their project submission. This helps the student to get the know-how of industry expertise and domain knowledge.

Aim of our Project Training

- Help students learn the basics
- Share practical knowledge and ideas
- Assist students to upgrade their skills
- Provide real time exposure to students
- Deliver technology in the appropriate manner
- Help individuals make a successful career

Keeping in mind that you are going to complete your MCA (Master in Computer Application) course and yet your project is pending due to lack of guidance and efficiency, Future Techno Labs provides you with live project training. Students can also get an academic project of their MCA course with a certificate after successful completion of the project.

As a company, we follow a process to complete the project training by:

- Helping the student in selecting the Project Title
- Overall Project analysis
- Deciding the timeline based on module wise completion
- Pilot Project
- Final Project
- Completing project documentation
- Project Submission

We provide an end to end guidance to the student, assisting them in completing their project. All of our project packages include a high-end training under the supervision of industry experts.
Training Program Highlights

Benefits of Program
