How the Uber Taxi Booking System Works

This is the same principle that the Uber clone is operating by. The clone can also be used for any other service apart from taxis.

Apps are the buzzword today – we use an app for everything. Whether we order movie tickets, flights, shop or even order food, we use this ultra smart way of doing it – mobile apps. Thanks to smart technology, we have all started to work smarter.

Every day thousands of apps are being launched – some make it big, some become history. The one app that has made it really big is Uber, the on-demand taxi app.

The question you may be asking at this point is why Uber? What is so special about it?

WHY EVERYBODY SWEARS BY UBER

Uber is a million dollar start-up that operates in almost every country in the world. The one point that has made it unique compared to the traditional taxi service is that it is an app allowing seamless integration between the driver and the passenger while relaying real-time information. Uber introduces a hassle free way of summoning a cab, allowing the passenger to track the driver whilst he is on his way to the pickup. Uber is an app that everybody in the world loves today.

If you are an entrepreneur looking to Uberise your business, then you need to understand the fine workings of this wonder app.

THE INTRICATE YET SIMPLE WORKINGS OF UBER

Uber, as all know is basically a taxi-booking app that connects drivers to passengers who are looking for a ride. By using smart facilities like GPS, Google Maps and auto calculation and payment, it allows riders to track their ride and helps in calculating the estimated fare and pay the fare automatically, doing away with the need to carry cash.

This is the same principle that the Uber clone is operating by. The clone can also be used for any other service apart from taxis. These days many of our necessities are ordered through such on-demand apps. These services include food, doctors, dietician, personal trainer, plumber, and beautician, well the list is unending. Such is the use of on-demand applications in our day-to-day life.

RUNNING A TAXI BUSINESS WITH THE UBER ANDROID MOBILE APP CLONE

The Uber clone software can be used in two ways to run your taxi business:

1. You can either have your own fleet of cars and drivers
2. An individual system, whereby your app facilitates the connection between riders to drivers.

If you are looking to invest in such a business and do not want to spend a fortune in setting it up, the second option is the best for you. This app is also ideal for taxi booking companies who are looking to modernise their working approach.

THE THREE IN ONE DESIGN OF THE UBER APP

The app is developed in three stages – or rather, three versions are developed – the driver app, the passenger app and the admin panel for the company or individual who will be operating the business.

HOW TO BOOK A CAB USING THE APP

With the smart features of the app, it is very easy to book a cab. Passengers input or scan details of their location or pick up point as well as the destination, so that available drivers can respond accordingly. The passenger has the facility to book the car model too. If he fancies riding in a mini – cooper or a BMW, then he can choose it

accordingly.

Drivers get to know of the passenger by way of push notifications sent by the server. As soon as the driver accepts the fare, the passenger is notified via the app. The passenger gets a picture of the driver and the location, as well as how long it will take him to get to you.

THE WONDERS OF REAL-TIME TRACKING

The Uber Script, to help display destination routes and car locations uses the smart Google Map. As soon as the ride is initiated, the GPS tracking system will display the real time location of the taxi as it drives towards the passenger pick up point.

FARE CALCULATION

The smart app has done away with traditional taximeters. Instead, the GPS system determines the mileage once the ride is over, and automatically calculates the fare, which will display on the screens of both the driver and the passenger.

MODE OF PAYMENT

The **Uber Android Mobile App Clone** has a cashless system whereby the mode of payment is by debit, credit or PayPal. Once the passenger enters his card details, they are automatically saved securely so that the passenger does not have to keep on re-entering them every time he uses the services. Both the driver and the passenger can give ratings.

CLIENT FRIENDLY

For the convenience of both the driver and the passenger, all trip logs are saved. In case of any complaints or suggestions and comments to the owner of the business or company, passengers can always look at the ride history and contact them accordingly. Receipts of all rides are sent to the customer via the registered email address.

If you are looking to build your own credible brand and improve sales or thinking of starting a new venture than the Uber Script is just the thing for you. If you are a taxi owner then you definitely need to invest in one these apps and make your business modern.
