

Reasons to Automate Your Home

Automation is taking everybody by storm now. But there are a few asking, why? Why should I automate?

My lifestyle is set doing daily routines and this is the way it has been going on for years, so why automate now?

There are many people who debate on this. Many people who are against automating. But what I think is, people find different reasons to point out mistakes in what they don't like or don't want to try. Automation is just a change in the technology. Rather an up-gradation in technology. Previously people used to travel by bullock carts, on horse backs, or used to walk up the distance as there was no means of transport then. Do they follow the same thing today?

Obviously, no. If they do not follow the same thing today and have accepted trains, buses, cars, etc. to be the modern modes of transport, then why not automation? We have both the modes for transport. The modern ones include trains, buses, cars, etc. and also the bullock carts, horses, etc. Then why do we choose the modern modes of transport? The reason being - because it is convenient and comfortable.

With automation, it is the same thing. There are a few things that we never used before as we were not aware of them. But now that it has been made available and affordable to all, then why should we not use it? The fact that they have made it affordable is to make it available for everyone. So we should take complete benefit and use it to the fullest. Also this would help us in growing closer to the technology.

Automation makes life easier. It is suitable for convenience, comfort, safety and security. [Elderly people have got a huge support with automation. Even the physically challenged find automation to be a boon for them.](#)

With so many benefits to its credit, nothing should stop you from trying automation solutions.
