

## Remanufactured Inkjet Toner Cartridges & Inkjet Ink Cartridges - Why Use Them?

---

Why bother with remanufactured inkjet toner cartridges & inkjet ink cartridges? Paragon Matrix cuts the hype & gives you the real reasons why you should sit-up and take notice.

Inkjet toner cartridges which are remanufactured, have some great advantages over brand new toner and ink cartridges. The remanufactured [inkjet toner cartridges](#) not only reduce the cost of the business, but also reduce the impact of these discarded products on the environment to a large extent. It might be a surprising fact for most us, but it is undefined that remanufactured inkjet toner and inkjet ink cartridges are sometimes superior in product quality as well. One of the very important advantages, which cannot be ignored at this stage of economic recession, is the support which the remanufacturing of inkjet toner and inkjet ink cartridges provides to the declining economy of the country.

### **Some Important Facts**

Contrary to the popular belief, these remanufactured toner and inkjet ink cartridges are compatible with most of the printers, copiers and fax machines which use all-in-one cartridges. However, Imaging systems using separate drums and toner bottles are an exception to this rule. The remanufacturing of inkjet toner cartridges and ink cartridges involves disassembling, repair or replacement of the worn out or damaged parts. It also involves the cleaning, refilling and reassembling of the [inkjet ink cartridges](#) and toner cartridges. This process can be repeated any number of times for the inkjet ink cartridges and inkjet toner cartridges.

### **Environmental & Health Issues**

The remanufacturing of inkjet cartridges and ink cartridges is an infallible solution to many of the environmental and health issues as it considerably decreases the amount of plastic, metals and rubber used in incinerators. Also, the remanufacturing of these products saves significant amount of energy.

It is a well known fact that almost three quarts of oil is used in the manufacturing of a single brand new cartridge. One should always consider the environmental benefits one can impress upon by the use of remanufactured ink and toner cartridges which can be easily remanufactured up to four times. There is no doubt that every time an inkjet toner cartridge or an inkjet ink cartridge is remanufactured, the resources are utilised to the maximum extent compounding the benefits of remanufacturing on the environment.

Most of the users confirm that the remanufactured ink and toner cartridges perform equally well, if not better than the brand new ones. This improved performance of the remanufactured cartridges is mainly contributed to the fact that most of the reputed remanufacturing companies exercise great quality control measures. Gone are the days when the companies used to follow the drill and fill methods to refill cartridges without proper quality control. In today's competitive scenario, every reputed company wants to prove its mettle through quality products and hence follow superior production measures.

Remanufactured inkjet ink and inkjet toner cartridges are considered to be an intelligent choice many big companies as they reduce the cost by 50 percent. Also they contain 20 percent more ink or toner than the new ones.

### **To Conclude**

In today's world when millions of used inkjet ink cartridges and toner cartridges are thrown in trash bins, remanufactured ink and toner cartridges prove to be a good choice as help in cost cutting without compromising with quality or performance.
